Identifiers	*Florida

Abstract

An 8-item survey instrument, Plans Beyond High School, was administered to over 80,000 high school seniors in 1968 as part of the Florida Statewide Twelfth Grade Testing Program, a battery consisting of academic ability and achievement tests in English, social studies, natural sciences, and mathematics. The survey instrument was primarily designed to collect data about the intended post-high school plans of the seniors that would be useful to higher education planners in Florida. This report presents the objectives of the statewide survey, an item-by-item discussion of the students' responses, and a comparison of the test performances of students planning to attend colleges and universities in Florida with those of students planning to attend out-of-state institutions. The findings revealed that approximately 85% of the seniors had aspirations to attend college. The number of seniors planning to attend state universities in Florida not only exceeded the capacity of the state institutions to accept entering freshmen in the following year but was almost two and one half times as large as the number planning to attend out-of-state universities. About 35% of the seniors planning to study at out-of-state universities and 23% of those planning to study in Florida ranked in the highest quintile on the test battery. Follow-up research is needed to identify the characteristics of students who as high school seniors plan to attend college but abandon their plans after graduation. (WM)

Acknowledgments

Plans Beyond High School, a survey that seeks to document the post-high school intentions of Florida students, was made a part of the Florida Statewide Twelfth Grade Testing Program at the suggestion of Allan Tucker, Vice Chancellor for Academic Affairs, State University System of Florida. As a part of the Twelfth Grade test battery, the survey extends to seniors both in public secondary schools and private high schools throughout Florida.

The survey instrument was designed by the staff of the Office of the Director of the Twelfth Grade Testing Program and the staff of the Office of Director of Educational Research, Florida Board of Regents. To those individuals, and to the high school teachers and guidance counselors who participated in the two successive tryouts of the questionnaire, we are indeed indebted.

Dr. William Hunt, Director of Institutional Analysis, Florida Atlantic University, and his staff processed the tabulation of survey results, prepared statistical summaries for the participating schools, and made statewide analyses of the responses. We are truly grateful to Dr. Hunt and his colleagues at Florida Atlantic University.

The teachers and other school personnel who administered the Twelfth Grade Battery gave a bit more of their time and effort in order to administer the survey questionnaire as well. We especially voice our appreciation to the personnel in the secondary schools of Florida who assumed this additional responsibility and to the seniors who gave their answers.

PLANS BEYOND HIGH SCHOOL

A Report of a Statewide Survey of Florida High School Seniors - Fall, 1968

1. Introduction

In the fall of 1968, more than 80,000 high school seniors in Florida took the Florida Statewide Twelfth-Grade Tests. Over 75,000 of these students, or 94 per cent of the number taking the test battery, responded to an eight-item survey of their post-high school plans. The survey instrument (Fig. 1), Plans Beyond High School, given for the first time in 1968, will become a permanent part of the test battery in the years to follow.

The Florida Statewide Twelfth Grade Testing Program is given in all Florida high schools each fall. The battery consists of a test of academic ability and achievement tests in English, social studies, natural sciences, and mathematics. A reading index, based on performance on verbal sections of the battery, is also obtained.

When the survey instrument was added to the Twelfth Grade Testing Program, the test battery itself was not changed in any respect. High schools merely extended the total time given over to the tests to include administration time for the survey.

The present booklet, with its analysis of the responses of the students who began their senior high school year in the fall of 1968, is appearing approximately one year after the survey was initially administered. As the survey is given in the years to follow, the interval between the collection of the data and the distribution of booklets similar to this publication will be shortened.

The five tests of the battery serve the needs of four groups:[1]

Students and parents - in making plans beyond high school.

High school authorities - in curriculum evaluation.

Guidance counselors - in assisting students to evaluate their strengths and weaknesses.

College admissions officers - in the selection of a well-qualified student body.

Test scores for individual students are reported in terms of percentile ranks based on the performance of the high school seniors in Florida taking the tests. The five public universities[2] in the State University System with freshmen and sophomore classes use a generally uniform specified total composite percentile score, as well as a uniform specified high school grade average to determine the eligibility of applicants for admission as freshmen and transfers to the lower division. The community colleges (public two-year institutions), on the other hand, employ widely varying use of test scores, with some having no test score or grade average admission requirements.

The survey objectives, which are contained in Section 2 of this report, are similar, but not identical to the objectives of the test battery. In Section 3, an item-by-item discussion of the responses of the students is given. Section 4 sets forth the results of an analysis of the test performance of students stating their intention to attend colleges and universities

---

in Florida as compared to the test performance of students planning to enter out-of-state universities. Section 5 presents the results of the survey in both frequency count and in percentages. Section 6 is a summary of the report.

This report, with its statement of objectives and a discussion of the responses of students to the items of the questionnaire, was prepared to give the schools a more complete view of the survey than was reflected in the printouts of survey data sent to the schools in the spring of 1969.

Statewide compilations of the responses are found in Section 4, but compilations for individual schools are not shown. Also the responses of individual students are not included in this report and will not be included in future reports.

The statewide school compilations for the 1968 survey were by sex and race. In the future, other analyses will be made. Also in the future, validity and coefficient studies of the survey instrument will be made which will entail the documentation of the responses of individual students to the survey items. When such research is undertaken, it will not necessitate a dissemination of the responses of individual students.

2. Objectives of the Survey

Principally, the survey was designed to provide information about the intended post-high school plans of high school seniors that would be a useful input to planning in higher education in Florida. Gaps between the expectations of high school youth and the subsequent fulfillment of the hopes and intentions should be of significance to laymen and educators alike. The survey results, together with the findings of projected follow-up studies that document the manner in which high school seniors implement their hoped-

for plans beyond high school, are intended to offer empirical data for assessing in part the adequacy and appropriateness of post-high school educational opportunities available to college-age youth in Florida. As educational planning is intensified to achieve the goal of expanding and in some degree of restructuring higher education to meet the needs of the State's young people, the survey results will perhaps give some direction to shaping the process of educational planning.

In the years since World War II, Florida has made dramatic strides forward in higher education. A series of research studies, inaugurated by the Department of Education in the early 1960s, reveals that the per cent of high school graduates going on to college is rising.[1] Although this overall development as reflected by statewide figures is gratifying, an analysis of the going-to-college trends according to defined geographical regions, sex, race, level of academic ability shows evidence that is less reassuring. If effort is to be directed toward bringing about a change in the college enrollment of high school seniors, the effort must come prior to the time that the student leaves high school. The survey data, which reach the school about mid-way of the senior year of the students surveyed, indicate to the guidance counselor and to the administration where any change-producing effort should be applied. It is hoped that the survey data will provide the high school counselor with information that heightens the effectiveness of his work.

Another objective of the survey was to give the colleges and universities some estimate of their following fall enrollments. In responding

---

[1]Florida High School Graduates, Department of Education, Tallahassee, Research Reports 26, 38, 45, 63, 72.

to the survey, the students coded the names of the institutions they plan to attend. The institutions were thus provided with aggregate numbers of the students who have made tentative choice of a college to attend. No list report of individual students selecting specific institutions was distributed.

Questions were also asked concerning the future plans of students who do not expect to attend college immediately after graduation. Thus, a final objective of the survey was to produce data that reflect broad trends in the aspirations and hopes of high school seniors. This information has potential significance for the secondary schools as well as for institutions of higher learning.

3. Discussion of Results

Sex: In unnumbered items the survey questionnaire called for the students to indicate male or female, and also to mark their race (white, Negro, other race). A relatively large number of students--about eight per cent--did not mark these two items.

In future administrations of the survey, the administrator will be asked to call the attention of the students to these unnumbered items of sex and race. Also, the item on race has been changed to read "black" instead of Negro. Finally, there will be a modification of computer programming procedures to get input on race and sex from the answer sheets used with the test battery.

Assuming that the students who left these two items blank were proportionately distributed among the sexes and the races, generalizations about the high school seniors in Florida in the fall of 1968 were possible. White

students made up 84.1 per cent of the seniors, and Negroes made up 15.6 per cent. Less than one per cent indicated that they were of a race other than white or Negro.

Females outnumbered the males among the white and Negroes, but not among the other races (American Indian, Chinese, etc.)

	White %	Negro %	Other %
Male	48.3	46.5	51.4
Female	50.9	50.8	44.6
Blank or invalid	.8	2.6	4.0
	100.0	99.9	100.0

There is no current (summer of 1969) basis for comparing the intended plans of the high school seniors as reflected in the fall, 1968 survey data with the actual courses of action taken by the students, inasmuch as the students will not enter college until the fall of 1969. Available, however, is the previously referred to series of follow-up research reports released by the Department of Education reporting the per cent of each year's high school graduating classes that entered college. The latest report in this series that has been released documents the number of spring, 1968 high school graduates entering college in the fall of 1968.[1] This report shows that of the June, 1968 high school graduates in Florida enrolling in college the following fall, 31.66 per cent entered public junior colleges, 10.22 per cent entered public universities in Florida, and 9.25 per cent entered college outside of Florida. Nearly 39 per cent did not go on to futher learning or study immediately.

The per cent of fall, 1968 high school seniors who expressed an intention to enter a public junior college in the fall of 1969 is larger than the per

---

[1]Florida High School Graduates, 1968. Department of Education, Tallahassee, July, 1969, Research Report No. 72.

cent of the previous high school class that actually entered public junior colleges (45.6 vs 31.66%). Similarly, the per cent of 1968 high school seniors stating an intention to enter a four-year public institution is larger than the per cent of 1968 high school seniors that enrolled in a public university in 1968 (24.2 vs 10.22%). Also, the per cent of 1968 high school seniors saying that they would go out-of-state for a college education was higher than the 1967 per cent of the 1967 graduating class that left Florida to enroll elsewhere (19.5 vs 10.25%).

In the fall of 1968, 61.12 per cent of the graduates of the previous spring went on to post-high school education. For the graduates of 1969, the proportion going on to college will probably continue to be about 61 per cent. More than 66 per cent stated an intention to continue their education when responding to the survey. If the actual going-to-college rate of 61 per cent continues to be manifested, then one student out of every 20 will not follow-up in his plans to enter college. Students having to give up their plans for a college education seem to be somewhat proportionately distributed among those who wish to enter a public junior college, a public university, or to go out-of-state, with the greatest difference between plans and actuality occurring in the case of the public universities. This may result from failure to meet admission standards.

As one reviews the above findings as well as the ones to follow immediately, he should keep in mind that the students expressed their preference for an institution at the beginning of their senior year in high school. This was prior to time that the students had knowledge that they were eligible for admission.

The survey data indicated that for Negro students who report themselves to be college-bound, the public junior colleges have relatively less appeal than for white students intending to enter college. In contrast, out-of-state institutions have greater attraction for the Negro student than for the white student. There is no difference in the appeal of the state's public universities for the two races, as the figures below show.

In State	All Students %	White %	Negro %
Public Univ.	24.2	24.5	24.6
Private 4-yr. Inst.	7.0	6.3	11.3
Public Jr. College	45.6	46.8	34.7
Private Jr. College	1.3	1.3	1.0
Out-of-State			
Institutions of all types	19.5	19.1	23.5
(Blank, Invalid, Etc.)	2.5	2.0	4.9
	100.1	100.0	100.0

When a closer look is taken at the responses of students intending to go out-of-state for their college education, one notes that white students generally expressed no sharp difference in their preference for private and public universities located outside of Florida. Negro students, however, indicated a strong preference for the public out-of-state institution. The per cents are shown below:

Out-of-State	All Students %	White %	Negro %
Junior College	7.8	8.2	5.3
Private 4-year	35.6	39.4	18.4
Public 4-year	46.5	42.5	64.8
Military Acad.	3.7	4.2	2.3
Foreign Insts.	1.3	1.4	.7
Other Inst.	3.4	3.3	3.6
Blank Responses	1.7	1.0	4.9
	100.0	100.0	100.0

The per cent of white males intending to enter college full-time was greater than for white females; among Negro seniors, the per cent of females expressing an intention to enter college was slightly higher than the male.

	Will Enter College		Will Not Enter College	Undecided	Total
	Full-time %	Part-time %	%	%	%
White					
Male	62.2	11.8	11.5	14.4	99.9
Female	52.9	10.2	23.3	13.6	100.0
Negro					
Male	44.3	13.6	16.3	25.9	100.0
Female	47.4	13.0	20.6	19.1	100.1

One of the most significant findings with respect to the responses to Item 4 (What is your main reason for attending college?) was the relatively low per cents of students of both races citing "parental desires" or "friends attending," as shown by the data on the following page.

The students not going on to college were asked to respond to Item 7 (Do you plan to attend college later?) The responses in column 3 (uncertain) when combined with the blank and invalid responses, exceeded the definite responses of "Yes" or "No," for all students except for white females. All in all, the total pattern of responses suggested considerable indecision among the students on the matter of entering college subsequent to the fall of 1969.

	Yes %	No %	Uncertain %	Blanks & invalid Responses %	Total %
White					
Male	12.5	34.1	41.1	12.3	100.0
Female	5.9	47.9	34.5	11.7	100.0
Negro					
Male	16.0	28.7	32.4	22.9	100.0
Female	13.9	26.8	37.5	21.8	100.0

The non-college bound students were also asked to respond to Item 8 (What is the main reason for your present indecision?) Over 45 per cent of the students did not give a specific reason, but indicated they were still trying to decide. Assuming that the responses to this item were valid, the results are of significance to the high school counselor.

	Need to know test scores %	Need to know final grades %	Need to know scores and grades %	Uncertain about finances %	Still uncertain %	Other, Blank Invalid, etc. %
White						
Male	2.1	1.5	9.3	12.2	45.1	29.8
Female	1.4	.7	5.9	13.0	54.1	25.0
Negro						
Male	2.1	1.5	8.5	21.9	36.7	29.4
Female	1.4	1.0	7.2	23.5	41.7	25.3

Summed across columns, the percentages shown above total within one per cent of 100.

	Challenge of Higher Educ. %	Professional Career %	Parental Desires %	Friends Attending %	Other Invalid, etc. %	Total %
White						
Male	15.8	71.1	1.2	.1	11.8	100.0
Female	26.5	62.3	1.7	.2	9.4	100.1
Negro						
Male	27.3	52.6	1.8	.4	17.9	101.0
Female	35.0	50.5	1.1	.0	13.4	100.0

Item 5 (What is your main reason for not planning to attend college?) indicated a lack of money to be more of a problem among black students than among whites. The large number of responses in the combined "other" and "blank" categories tends to detract from the significance of the specific

responses to this item. Either the response titles were inappropriate, or the students were not inclined to cite a specific reason for not attending college.

	Interested %	Lack of Money %	Did Not Prepare %	Might Not Pass %	No Home Encour. %	Other, Blank Etc. %	Tota Total %
White							
Male	28.5	5.2	17.8	6.6	.3	41.7	100.1
Female	31.1	4.6	12.7	3.0	.5	48.1	100.0
Negro							
Male	14.2	14.1	17.7	5.6	.9	47.6	100.0
Female	9.7	15.6	12.7	7.7	.7	53.6	100.0

White females not going to college stated an intention to enter full-time work with greater frequency than the non-college bound students in the other sub-groups. Entry into the Armed Forces is contemplated by a large component of the young men of both races.

	Work Full-time %	House-wife %	Armed Forces %	Voc. Tech. School %	On-the-job Training %	Nurse Tng.- Hospital %	Other, Blank, etc. - %	Total Total %
White								
Male	14.4	0	42.6	18.9	5.5	0	18.3	99.7
Female	30.0	11.5	1.8	21.4	5.3	5.6	24.3	99.9
Negro								
Male	12.1	0	32.2	24.6	7.8	0	22.8	99.5
Female	11.9	.9	6.4	33.3	11.9	11.6	24.0	100.0

4. Students Expressing In-State and Out-of-State Educational Plans

In Florida in recent years, educators and laymen alike have asked if Florida was losing substantial numbers of her most academically talented high school graduates to out-of-state colleges and universities. There are reasons why such a trend may occur. Not only do out-of-state institutions offer attractive

scholarships to students of high scholastic caliber, but they tend to establish admissions criteria that screen out students of average and below average academic promise in favor of students of high potential ability as revealed by test scores and grades.

Scholarships are available, of course, to students who enter colleges and universities located in Florida. In the Regents Scholarship Program, one of the largest programs in the State, awards are made to all students with a total composite score of 425 and above on the Florida Statewide Twelfth Grade Program who have a B average and who are recommended for the award by high school principals. In 1968-69, 634 awards totaling $327,000 were made. This scholarship program enables many students of above average ability to meet their basic college expenses. There is little likelihood, however, that these awards led many students of high academic talent selected as recipients for more lucrative scholarships proferred by out-of-state institutions to remain in Florida at the cost of accepting a scholarship for a lesser amount.

The contrasting admission policies of in-state and out-of-state institutions of higher learning have the net effect of bringing about the enrollment of average and below average students to a greater degree in Florida institutions than in out-of-state institutions. The community colleges in Florida which generally follow an open-door admission policy, enroll approximately one out of every three high school graduates. The public and the private institutions in Florida, similar to the out-of-state institutions, prescribe cutoffs on test of general ability for admission, but the cutoffs for the institutions of higher learning in Florida are not as high as the cutoffs employed by some out-of-state institutions. As a result, the colleges and universities in Florida enroll students whose test scores fall along the

entire percentile scale spectrum, and the out-of-state institutions tend to enroll those students whose scores are mainly in the higher percentile ranks.

The survey data provide a basis for determining more precisely the tendency of high ability students to leave Florida for their college work. Table 1 shows the per cent of students, both the ones going out-of-state and in-state, in the lowest, the second lowest, the middle, the second highest, and the highest quintile on the aptitude test and reading index. As will be observed, the per cents of students planning to enter college in Florida were greater in the two lowest quintiles than the per cents of out-of-state bound students in the two lowest quintiles. In the middle quintile, the per cent of in-state students was also larger, but not as much so as in the two lowest quintiles. The per cent in the two subgroups was approximately the same for the next highest quintile (61st - 80th percentile). The greatest difference in quintile composition of the out-bound seniors compared to the in-state occurred in the highest quintile. For the out-bound, about 35 per cent fill in this quintile; for the in-bound, the figure was about 23 per cent.

The frequencies shown in Tables 1-3 represent approximately 50% of the students surveyed. In assembling data for analysis, test scores and survey data were matched on social security number. Inaccuracy in the coding of social security numbers, and the omission of social security numbers altogether reduced the number of students in the analysis to about 37,000.

TABLE 3

PER CENT OF STUDENTS INTENDING TO GO
OUT-OF-STATE AND REMAIN IN-STATE (BY QUINTILES)
NATURAL SCIENCE AND MATH

QUINTILES	Nat. Science				Math			
	Out-of-State		In-State		Out-of-State		In-State	
	freq	%	freq	%	freq	%	freq	%
1 - 20	938	13.3	4927	16.3	849	12.0	4935	16.4
21 - 40	1000	14.2	5461	18.0	743	10.5	4509	14.9
41 - 60	1249	17.7	6277	20.8	1204	17.1	6231	20.6
61 - 80	1540	21.8	6815	22.6	1508	21.4	7216	23.9
over 80	2324	33.0	6732	22.3	2746	39.0	7316	24.2
Total		100.0		100.0		100.0		100.0

The data in tables 1-3 reveal that a proportionately larger number of students average or above in academic ability plan to enter college than below average students, as measured by test performance. Although the students expressing a desire to enter out-of-state schools are as a group more academically talented than their in-state counterparts, the differences, as revealed by the per cents in the quintile divisions, are not sharp, except for the highest quintile.

Obviously, some of the low-scoring students wanting to go out-of-state will not be admitted, and will enter post-high school education in Florida if they continue their education. Also, some of the high scoring students may not be admitted to the out-of-state institution of their first choice, and will end up by attending a college or university in Florida.

When the level of composition was confined to students in the 95-99 percentile range, the proportion for students intending to go out-of-state became approximately twice as great as for those planning to remain in-state. When using absolute numbers rather than relative composition, the students falling in the 95-99 range who plan to stay in Florida greatly outnumber those in the same percentile range planning to leave the state to enter college (Table 4).

The expected number of students in the 95-99 percentile range was 3,500; the analysis sample in this top bracket (Table 4) contained over 3,000 or approximately 83 per cent of the expected 3,500. Throughout the total percentile range, less than 50 per cent of the students were matched on survey responses and test scores when sorted on social security number. Students in the 95-99 percentile bracket, therefore, were as a group more accurate in coding their social security numbers than students generally.

TABLE 4

FREQUENCY OF STUDENTS INTENDING TO GO OUT-OF-STATE AND REMAIN IN-STATE (95-99 PERCENTILE) FOR THE VARIOUS TESTS IN THE BATTERY

PERCENTILE	Aptitude Test		Reading Index

6. Summary and Conclusions

In the fall of 1968 two-thirds of the Florida high school seniors indicated that they planned to attend (either part- or full-time) a college or university upon graduation from high school. Another eighteen per cent reported that they planned to attend college at a later date. Altogether, about 85 per cent had aspirations to attend college, either immediately upon graduation or in the years following graduation from high school. The number that will actually do so will likely range between 55 and 60 per cent.

Follow-up research is needed to identify the characteristics of students who as high school seniors plan to attend college, but as high school graduates, abandon their plans for a college education. Should some kind of training different from that now offered in college (junior or senior) be made available to this group?

The number of students planning to attend state universities in Florida greatly exceeds the capacity of those institutions to accept entering freshmen. This is especially true for the University of Florida where 4908 students said they wish to enroll in the 2800 available spaces. This finding has implications for the high school guidance counselor.

The number of Negroes stating plans to attend Florida State University, the University of Florida, and the University of South Florida appears to exceed the number that will actually enroll as freshmen. Although the enrollment of black students in these three public universities is increasing, especially at the University of South Florida, there is little likelihood that combined Negro freshmen enrollment in these three institutions will reach 300.

The generally-held belief that many capable seniors plan to attend college out-of-state was substantiated by the survey data. On the Twelfth Grade Tests, about 35 per cent of the seniors intending to attend out-of-state ranked in the highest quintile. For those intending to enroll within the state, about 23 per cent ranked at this level. A frequency count of the students in this top-most quintile revealed, however, that the actual number of high-scoring seniors planning to enter a college or university in Florida was approximately two and one-half times as large as the number planning to leave the state for purposes of a higher education. This comparative estimate of the actual numbers of students leaving and not leaving the state to enroll in a college or university gives evidence of the widespread appeal of the Florida institutions of higher learning to the talented student.
